

TWO WEEKS. ZERO IDEA TO **FULLY AUTOMATED.**

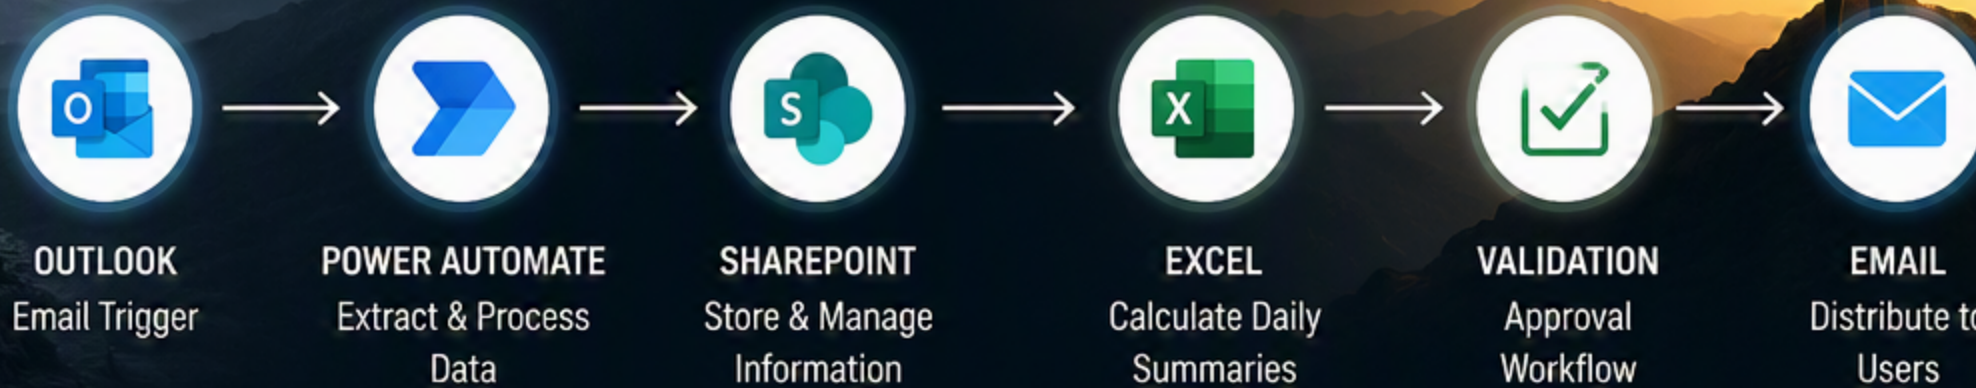

DAY 1

I had no idea
how to build
this automation.

DAY 14

A fully functioning
end-to-end
solution.

Give me enough time, and I'll figure it out.

THE REALITY

- ✗ Broken table references
- ✗ Metadata returning wrong values
- ✗ File path issues
- ✗ Excel connector errors
- ✗ Aggregation logic challenges
- ✗ Every solution created two new problems

*It was messy.
It was frustrating.
But every failure
taught me something.*

THE RESULT

- ✓ Automated email collection
- ✓ Automated data extraction
- ✓ SharePoint & Excel integration
- ✓ Daily summary calculations
- ✓ Validation & approval workflow
- ✓ End-user notifications
- ✓ Tested, documented & presented
- ✓ End-to-end working prototype

*A process
that used to take
hours every day,
now happens
automatically.*

MY APPROACH IS ALWAYS THE SAME:

SHOW ME WHAT IS
CAUSING FRUSTRATION.

SHOW ME WHAT IS
REPETITIVE.

SHOW ME WHERE
THE DATA MOVES.

SHOW ME WHAT
NEEDS APPROVAL.

THEN GIVE
ME TIME.

AND I'LL TURN IT
INTO A WORKING
PROCESS. **PROUDLY.**
